Art Unit: 2653

1) Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-38, drawn to an optical head comprising: a light source, outputting light at an initial light output location; at least a first photodetector array mounted in a fixed position with respect to said initial light output location, said first photodetector array having at least a first surface defining a photodetector plane; an optical element unit, mounted in a fixed position with respect to said light output location, said optical element unit having first and second beam shaping optical elements which receive light output at said light output location, said optical element unit further comprising at least a third optical element configured for directing at least a portion of light reflected from said medium along a path for arrival at said first photodetector array; said optical head providing at least a first optical path, where said first optical path originates at said initial light output location and reaches at least said read/write medium., classified in class 369, subclass 112.01.

II. Claims 39-42, drawn to a method for forming an optical head comprising mounting a first light source with respect to a substrate; etching at least first and second beam shaping optical elements in a first optical element unit; and mounting said optical element unit with respect to said substrate in a position such that said first and second optical elements intercept at least a portion of light generated at said light source., classified in class 264, subclass 1.1

2) The inventions are distinct, each from the other because of the following reasons:

Art Unit: 2653

3) Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by a process other than using etching.

4) Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5) Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimlien T Le whose telephone number is 703 305 3498. The examiner can normally be reached on M-F 8a.m-5p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Korzuch William can be reached on 703 305 6137. The fax phone numbers for the organization where this application or proceeding is assigned are 703 872 9314 for regular communications and 703 872 9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 305 3900.
